

Ex: no:13

Implement a c program to check for Elements repeated twice - array.

AIM:

To write a c program to check for elements repeated twice in a given array.

ALGORITHM:

Start the program

Read the no. of elements (n)

Read n elements into an array.

Use two loops to compare each element with the others.

If a number repeats twice, print it.

Stop the program.

OUTPUT:

Enter number of elements: 5

Enter 5 elements: 1 3 5 4 5

Elements repeated twice: 5

RESULT:

The program successfully checks and prints the elements that are repeated exactly twice in the given array.
